application discloses a receiver receiving a signal and correlating the received signal through a plurality of correlators, and comparing the result of the plurality of correlators. Prior art teaches all the limitations claimed. However, prior art does not further teach wherein the received signal comprises a first and second portion which repeats the content of the first portion after a repeat interval, and a revised position of the first and second portions are determined based on the comparing step in order to equalize the first and second correlations of the plurality of correlators.
